

Servenger

Complete Electronic Design & Product Development

Your Product Is Our Passion!

You will benefit from our services when you:

- Have a product idea but lack the specialized technical training.
- Have the skills but not enough available personnel time.
- Are stuck on a particular technical point.

Let us help you achieve product success with our 100+ years of experience:

Product Development:

- New Product Planning
- Project Management
- Problem Solving
- Manufacturing, incl. Asian sources

Technical Solutions:

- Schematic design, PCB layout
- Embedded microprocessor software
- Prototype building and testing
- Regulatory compliance and EMI solutions

What we do to make your IDEAS → Into → SUCCESSFUL PRODUCTS:

- Create a development proposal that quickly answers your important questions:
What is this going to cost? and **How long is it going to take?**
- Provide skillful project management committed to developing your product on time and on budget.
- Build first prototypes with circuit boards, hardware and software, ready to test.
- Build final prototypes that closely represent the product that will be manufactured, ready for compliance testing and customer shows with accurate manufacturing estimates.
- Work with your manufacturing source for start up, or provide a source for you.

Servenger

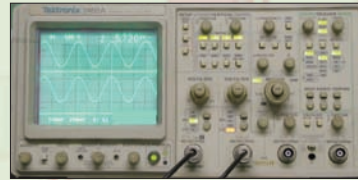

Complete Electronic Design & Product Development

Some Past Projects:

Comparator IC for Tek 7612 Digitizer

Microelectronics for Tek 2465 Scope

Fiber Optic Data Link for U2 Recon Plane

Sweep Circuit for 200 TeraHz Optical Scope

NEC FD-6 Fiber Multiplexer:

NEC ISC-303 Digital Telephone System

Servenger Programmable Analog Module

Stormtrooper Helmet Comm Link
